Access to diagnostic registers

The **KET-RMB-211.CN.35** climate control interface is a versatile **protocol converter for VRV Daikin systems** equipped with **Daikin Modbus Interface DIII EKMBDXB7V1** control unit, designed for rapid and straightforward integration between air conditioning control units and higher-level control systems such as **BMS**, **BEMS**, **SCADA**, **PLC**, **Gateways**, etc. This intelligent device offers a **standardized ModBUS** interface to the controller (master), organizing the system and managed zones on different slaves while maintaining a uniform control structure for all. This architecture significantly simplifies the integration process. The consistency in the structure of control and monitoring registers within the KET-RMB series ensures uniform management of different air conditioning systems. The **amplified wireless connection** with **IEEE 802.15.4 protocol** allows for remote installation of

The **amplified wireless connection** with **IEEE 802.15.4 protocol** allows for remote installation of the interface in secondary panels, eliminating the need for costly and complex wiring, leveraging the benefits of **wireless** communication for greater installation flexibility.
