

KET-SFO-100

General and specific training for monitoring systems and BMS

• Enables technical teams to maximise the effectiveness of monitoring and BMS systems
• A trained technical team can quickly solve any problems
• A trained technical team enables optimised energy consumption and reduced operating costs
• training of technical teams makes it possible to guarantee the safety of installations and people

Our training service is designed to equip your technicians with the necessary skills to operate monitoring and BMS systems.
Invest in the Competence of Your Team We offer various training methods to suit your needs:

- **Distance learning**: Interactive and flexible online courses.
- **On-site training**: Practical sessions at your location or ours.
- **On-the-job training**: Our preferred option, which involves our technicians working alongside yours during the initial installations, for an immersive and practical learning experience.

We believe that training is a fundamental investment. A competent team is able to:

- **Maximize the effectiveness** of monitoring and BMS systems.
- **Quickly resolve** any issues.
- **Optimize energy consumption** and reduce operating costs.
- **Ensure the safety** of plants and people.

By choosing our training service, you increase your team's awareness and maximize your investment in energy efficiency technologies.
